PROFILE

Full-stack software engineer with two years of professional experience delivering and supporting business-critical applications in the healthcare benefit management sector. Builds back ends in C# and .NET (REST Web APIs, Blazor) against SQL and PostgreSQL databases, and front ends in React and TypeScript. Takes work from business requirement through to production: designing the solution, writing and unit-testing the code, shipping it through Azure DevOps pipelines, then supporting it in production until the root cause of each defect is found and fixed. Microsoft Certified Power Platform Developer (PL-400) with further Azure and Dynamics 365 certifications, working in an Agile/Scrum delivery team.

CORE TECHNICAL SKILLS

Back-end: C#, .NET / ASP.NET, REST Web APIs, Blazor, unit testing with xUnit

Front-end: React, TypeScript, JavaScript, Vite, Next.js, HTML/CSS, responsive UI

Databases: Microsoft SQL / Azure SQL, PostgreSQL (Neon, Supabase), Dataverse

Cloud & DevOps: Microsoft Azure, Azure DevOps (repos and pipelines), GitHub Actions, YAML CI/CD, Docker, Git; AWS (basic); Kubernetes (exposure)

Integration: REST APIs, Microsoft Graph API (incl. On-Behalf-Of auth flow), CORS configuration

Scripting & OS: PowerShell (incl. SQL database connectivity), Bash and Linux (basic, WSL2/Ubuntu), Windows

Microsoft Platforms: Dynamics 365, Dataverse, Power Apps, Power Automate, PCF components, SharePoint

Practices: Agile/Scrum, full SDLC, debugging and root cause analysis, technical documentation

PROFESSIONAL EXPERIENCE

Junior Software Engineer & Application Support

Mar 2025 – Present

HearConnect SA (audiology benefit management), Centurion

Full-stack delivery and production support across the company CRM platform, provider portal, public website and internal business systems.

- **Cut leave processing time by 80%** by replacing a manual process with an automated leave management system (Power Apps, Power Automate, SharePoint) now used by **16+ employees**, released across separate Dev and Prod environments through Power Platform Pipelines.
- **Restored reliable production deployments** after releases stopped taking effect, tracing the fault through solution-layer analysis to an unmanaged layer overriding the managed solution and to imported versions left unpublished.
- **Eliminated duplicate and missed leave deductions** by consolidating approval logic that existed in two places into a single source of truth, and correcting a field-mapping error in the deduction rules.
- **Delivered the company's new public website end to end** — rebuilt from scratch in React and Vite, managed through a dual-remote Git workflow (Azure DevOps primary, GitHub mirror).
- **Shipped and maintain the healthcare provider portal in Blazor (.NET)**, extending it through Azure DevOps.
- **Extended the CRM platform beyond its out-of-the-box limits** with custom PCF components written in TypeScript against the Microsoft Graph API, and developed CRM features across Web APIs, Azure SQL, Dynamics 365/Dataverse and React front ends.
- **Gave staff in-app access to company SOPs** by building a SharePoint document browser inside the React application using the Microsoft Graph API (On-Behalf-Of flow), removing the need to search a separate system.
- **Developing a white-label claims adjudication back-office application** in React with a token-based theming system, so the same product can be rebranded per client (in progress).
- **Ended recurring agent lockouts** by introducing a proactive password-reset process with the external service provider, aligned to the 42-day expiry cycle, after triaging repeated VPN, remote desktop and access incidents.
- Works in an **Agile/Scrum** delivery team with business and technical stakeholders across all phases of the development lifecycle, and produces technical and user-facing documentation.

Power Platform Developer Trainee

Jul 2024 – Dec 2024

Mecer Inter-Ed, Midrand

- Completed a six-month Power Platform developer traineeship, moving into a full-time engineering role on completion.

Earlier Experience

Multimedia Developer (Internship) | Mbula Research and Development — Jun 2022 – Dec 2022

AR/VR Development Intern (Contract) | Go4IR — 2020 – 2021

KEY PROJECTS

ZarFlow — Personal Finance Application | *C# / .NET, PostgreSQL, React, Vite, xUnit*

- Built and deployed a full-stack application end to end: a **C# .NET REST API** on Render, a Neon **PostgreSQL** database and a React/Vite front end on Vercel. Covered the API with **xUnit unit tests**, configured CORS across environments, and used **PowerShell** for database connectivity during development.

E-commerce Web Application | *Next.js, Docker*

- Building a **containerised** e-commerce application with Next.js and Docker.

University Application Web App | *React, Supabase, GitHub Actions*

- Built and deployed a web application with a Supabase backend and **automated CI/CD through GitHub Actions**, including custom domain and DNS configuration.

CERTIFICATIONS

- Microsoft Certified: Power Platform Developer Associate (**PL-400**)
- Microsoft Certified: Azure Fundamentals (**AZ-900**)
- Microsoft Certified: Power Platform Functional Consultant Associate (**PL-200**)
- Microsoft Certified: Dynamics 365 Sales Functional Consultant Associate (**MB-210**)

EDUCATION

Advanced Diploma in Multimedia Computing | Tshwane University of Technology

National Diploma in Multimedia Computing | Tshwane University of Technology

ADDITIONAL INFORMATION

Languages: English (fluent), isiZulu (native)

Interests: Cloud architecture, API design, XR development, chess
